Sew Inspired EZ Curved Piecing Method ©

The Sew Inspired Design System will enable you to design and create perfectly pieced uniquely different quilts. Many quilters shy away from making blocks that incorporate curved blocks because they are afraid of piecing curves. With the Sew Inspired Pinless EZ Curved Piecing Method, anyone can create these curve blocks easily to create beautiful and accurately pieced quilts. More quilt ideas and instructions are available at the Sew Inspired website: www.sewinspired.com. The piecing method described below is described using the Winding Curve Template but can be done with any of the Sew Inspired blocks using Wash-a-way Wonder tape from Collins.

1. Place the sticky side of the Wonder Tape on the hill side of the curved edge of the right side of the fabric on Piece #8. Clip into the tape if needed to curve it. Leave the paper in place on the top side until you have the tape applied to the entire length to be sewn as shown:

2. After you apply the tape, peel off the paper from the Wonder Tape so that you reveal the double stick tape.

3. With right sides together, match the end points where you will begin sewing.

4. Once you have the two ends matched together, you will work your way toward the center, pressing the fabric edges together so that the edges line up perfectly without any tucks or puckers.

5. If the pieces do not line up perfectly, simply pull apart the two sections and reposition them until you have the pieces lined up exactly and they lie perfectly flat.

6. Once they are taped together, open them up to make sure the pieces lie flat.

4. If you are satisfied that the seams match up properly, stitch them with $\frac{1}{4}$ " seam allowance, stitching slowly and raising your presser foot with your needle down as you pivot around the curve.

5. Attach the right sides of the outer curve of Piece A to the right sides of the inner curve of Piece B using "Wonder Tape" as you did in Steps 2-5 above.

9. Sew around the seam that you just taped, sewing slowly and raising your presser foot with the needle in the down position often, making sure that the fabric going under the needle is laying flat so that you don't sew in any pleats or tucks.

10. Lightly press the finished block flat; you may change the directions that the seams go towards once you get ready to sew all your blocks together, so that the seams will nest together. Once all of your blocks are done and laid out, press each block so that the seams of adjacent blocks go in opposite directions and trim with 9.5" or 6.5" square-it tool to complete your perfect block.
